

auracare

Revolutionizing Frontline Care

THE PROBLEM

Personalized medicine needs the full picture, that infrastructure doesn't exist.

SHORT CONSULTATIONS

5 Minutes

The average duration of patient consultations in more than half of the world.¹

DATA DEFICIT

44%

The percentage of consultations where a lack of patient data harms the final diagnosis.²

FRAGMENTED NARRATIVE

Daily life

The EHR is a series of snapshots: long gaps with no context in between.

Consultations are just a snippet. Data is Incomplete. The full picture is obscured.

MEET AURACARE

A full support system for patient care.

Reasoning through encoded patient information by cross-referencing social history, vitals, medical testing, and the live consultation to produce a full diagnostic in the background; while the clinician focuses on the patient.

STRUCTURE

The Core Components

DATA AGGREGATION ENGINE Encodes daily life A patient portal that aggregates data and encodes it into our CDSS to develop the full picture.	OUR HARDWARE Encodes the exam Stethoscope, BP monitor, otoscope, all built in-house. We tailor our devices to translate vitals into our reasoning core.	TRANSCRIPTION MODEL Encodes what is said Transcribed and translated live. The medical record is documented concurrently while the clinician focuses on the patient.
--	---	---

SNOMED CT · ICD-11 · LOINC · HPO

All encoded into health data standards and standardized medical terminology.

THE WEDGE • STAGE 1

We're starting at the patient.

Stage 1 is Auracare's **data aggregation engine**, shipped as a patient-oriented portal. It learns a person's daily life from existing online connections and external information, encoding everything into SNOMED CT, fed directly to our CDSS.

THE ENTRY POINT

Consultations don't paint the full picture.

BIOPSYCHOSOCIAL MODEL

90%

of a person's health is influenced by non-medical factors, excluding genetics.³

Our Data Aggregation Engine completes the patient history.

THE STAGES

The Full Picture

STAGE 1

Connectors

A full lifestyle picture shared by the patient and encoded continuously.

Data Aggregation Engine

Collating patient data from all sources:
The complete picture.

Third Party Information

Prescriptions, consultations, and imaging from a patient's past check-ups.

STAGE 2

NICE (BNF) / MIMS

Formularies and comprehensive prescribing guidelines fully integrated.

CDSS

Reasons over all data to create a personalized care plan.

Proprietary Hardware

Normalised signals feeding into the core, sourced by our in-house hardware.

STAGE 3

Integrated Documentation

Documentation standardized to the hospital's existing systems.

Ranked differentials

Ordered by likelihood and evaluated against the patient's own history.

Supply Optimization

Reducing stock wastage and tailoring drug selection.

ENCODING

SNOMED CT · ICD-11 ·
LOINC · HPO

CDSS: The Reasoning Core

Full data transparency over our reasoning model, built off the foundations of medical standards:
Glass box, not a Black Box

OUR OWN HARDWARE

We build the hardware, so the data comes easy.

Social History is only one piece of the puzzle. A full clinical decision needs measurement.

We manufacture our own examination devices through OEM partnerships in China,
so vitals arrive normalized and coded to our need without relying on third-party hardware.

Recording stethoscope Captures heart and lung activity as data the core can read.	Blood-pressure monitor Clinical-grade blood pressure readings, streamed straight into the reasoning core.	Otoscope Ear canal/drum imaging is captured and passed to the core automatically.
---	---	---

Three devices built, more on the way. Certification targeted for 2027.

TRACTION

Building Momentum

Funding, partnerships and clinical pilots already in place.

UK PHARMACY PARTNERSHIPS, CDSS PILOT	28
UK GOVERNMENT FUNDING AWARDED	\$134k
ANGEL INVESTMENT, HONG KONG	\$400k
CLINICAL TRIAL, EC HEALTHCARE	Dec 2026
CLINICAL TRIAL, CHINESE ACADEMY OF SCIENCES	Feb 2027
HARDWARE PARTNERSHIPS, CHINESE OEMs	2
Completed Founders Factory Healthcare: Hospital to Community cohort and secured 3-year Vanta contract for 5 regulatory frameworks (ICO and CE).	

THE JOURNEY

The Road to the Clinic

OPPORTUNITY

A Large Clinical Market

\$30B

Total addressable market⁴

WHO Workforce: 12.7 million medical doctors worldwide × \$2,400 per clinician per year.

\$11B

Serviceable obtainable market

The segments our launch markets and clinical route actually reach.

COMPARABLES

OpenEvidence
\$12B valuation

Bayesian Health
~\$40m valuation

REVENUE

Monetization

1 product, 2 models

Direct to Digital

CDSS API access for clinical service providers:
ambient scribe, telehealth, EMR, triage.

Direct to Service

Sold to hospitals, GPs and pharmacies,
priced on the clinician time it saves.

THE TEAM

Clinical, engineering and manufacturing

Tanush Pandey

CO-FOUNDER · CEO & CMO

Medicine at Imperial College London. Leads clinical strategy, safety, and research, along with HCP relations.

Stephen Okita

CO-FOUNDER · CTO

Computer science at UC Berkeley. Sets the architecture and product direction; business relations in San Francisco.

Hinlun Chen

CO-FOUNDER · COO

PPE at LSE; runs an OEM with two factories. Leads operations and partnerships in Hong Kong and China.

Julius Chu

CPO

Computer science & Entrepreneurship at NYU. Leads product, design system, the consumer experience.

Karam Elradie

HEAD OF ML

Leads machine learning (PhD): the neuro-symbolic core and graph models behind our reasoning.

UC Berkeley

THE ASK

We are raising a seed round

\$2.21M

12-month runway

\$2.01M deployed, plus 10% contingency.

Team	6–7 personnel, \$50–200k per head	\$910k
Clinical & regulatory	Class IIa/IIb trials, CDSS studies, hardware certification	\$500k
Operating & G&A	IP and patents, legal, insurance, admin, travel	\$300k
Marketing	Social, online and content-led customer acquisition	\$200k
Compute & data	AI training runs, processors and data	\$100k
TOTAL DEPLOYED		\$2.01M

auracare

GET IN TOUCH

Be a pioneer.

We are raising a seed round to build the core engine,
certify the hardware, and take Auracare to clinics.
