

The world's most *personalised* healthcare.

TWO PRODUCTS, ONE PATIENT MODEL

[Auracare](#) · clinical decision support in all clinical environments (*B2B*)

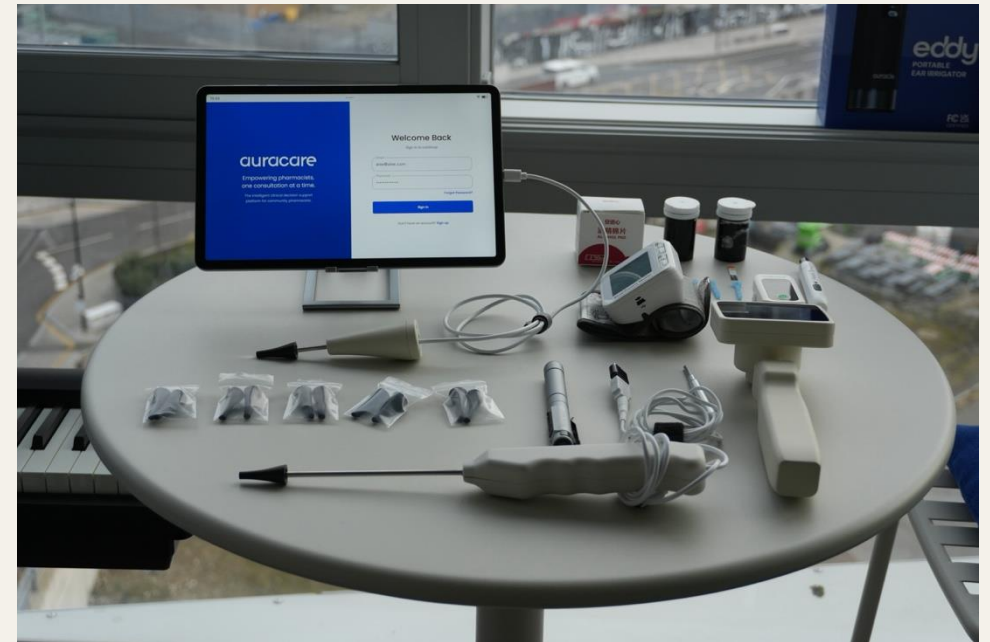

[Auratwin](#) · agentic wellness hub, a spin-out of Auracare (*B2C*)

Meet Auracare

Clinical decision support that works inside the consultation.

The live conversation, acute vitals from our own hardware, the patient's lifestyle picture from Auratwin, our consumer spin-out, and more.

One reasoning core built on novel deep-tech: ranked differentials, tailored next steps, notes that write themselves.

THE AURACARE PLATFORM · PROPRIETARY HARDWARE, LIVE SOFTWARE

Clinicians already want AI. Today's tools don't use today's technology.

Trust breaks at the screen

80%

of doctors already use AI in some form. The utility is there but the UX erodes the doctor–patient relationship.

Generic by architecture

34%

is the specialty-benchmark score of these models.

Disconnected from

Daily life

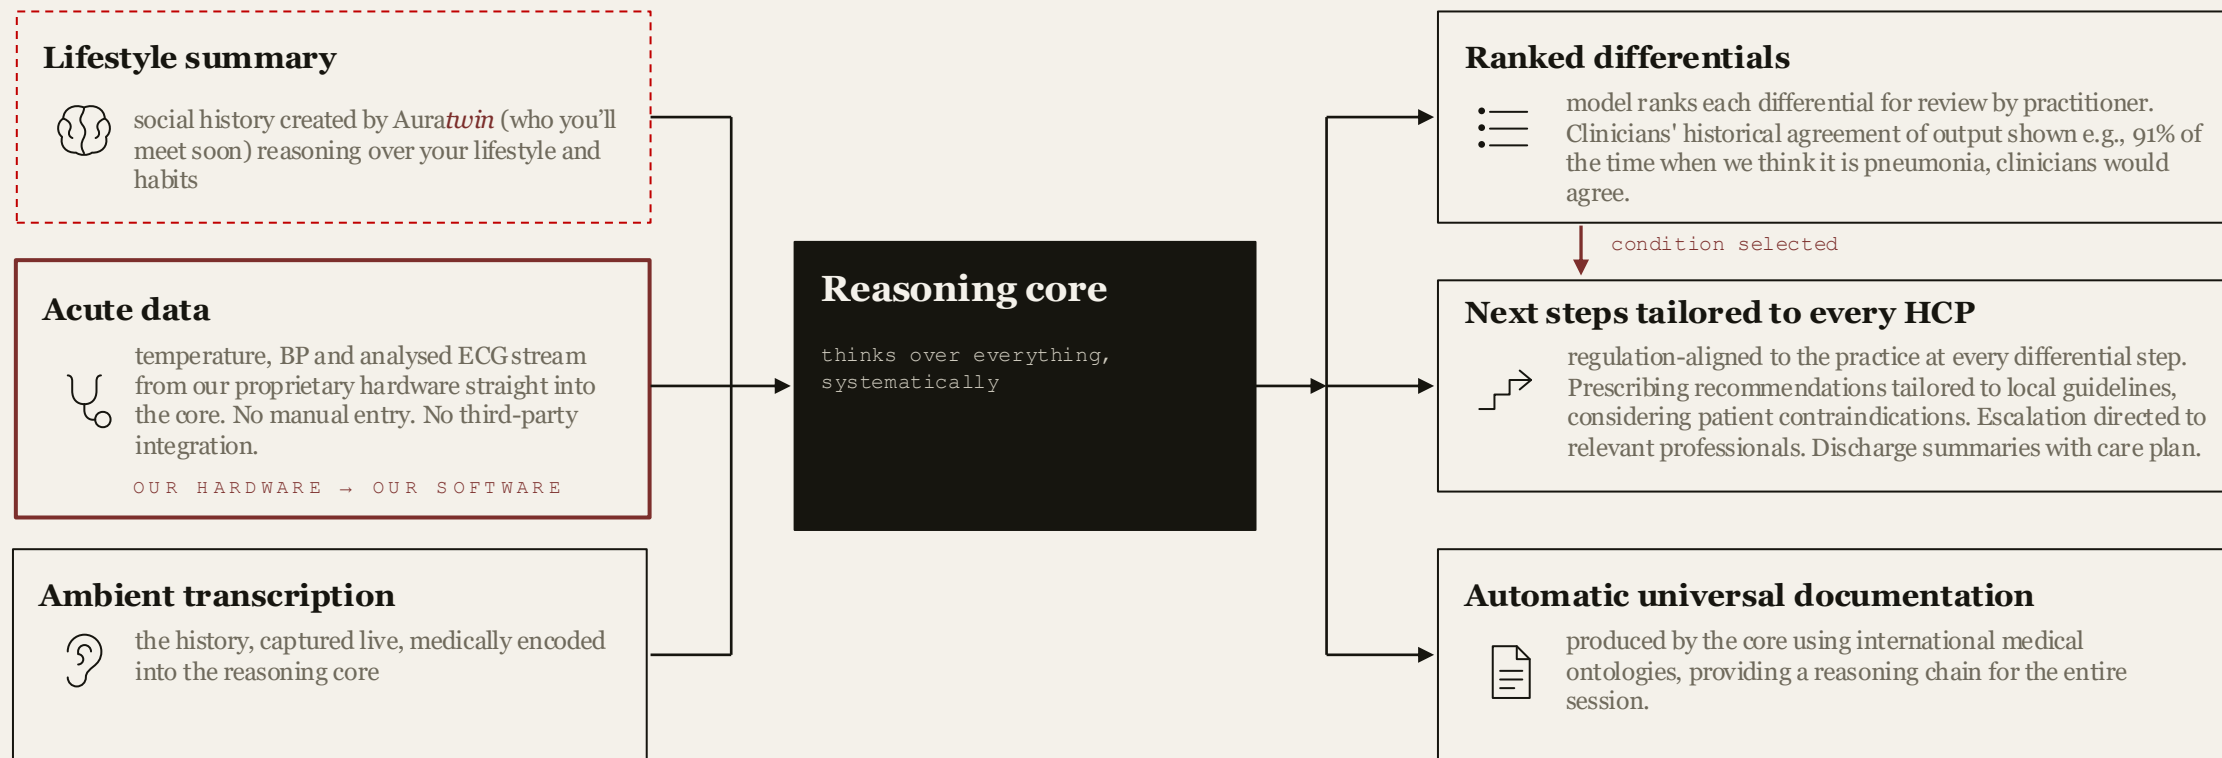

lifestyle and social history is slow to gather and subject to bias. The EHR is a series of snapshots: long gaps, no signal in between.

Clinicians will adopt AI that respects the patient. Nothing today does.

Source: MedXpertQA subspecialty board pilot (medRxiv 2025.11.29.25341091, Nov 2025; n=100 subspecialty scenarios). Score of 34%.

Auracare: an overview

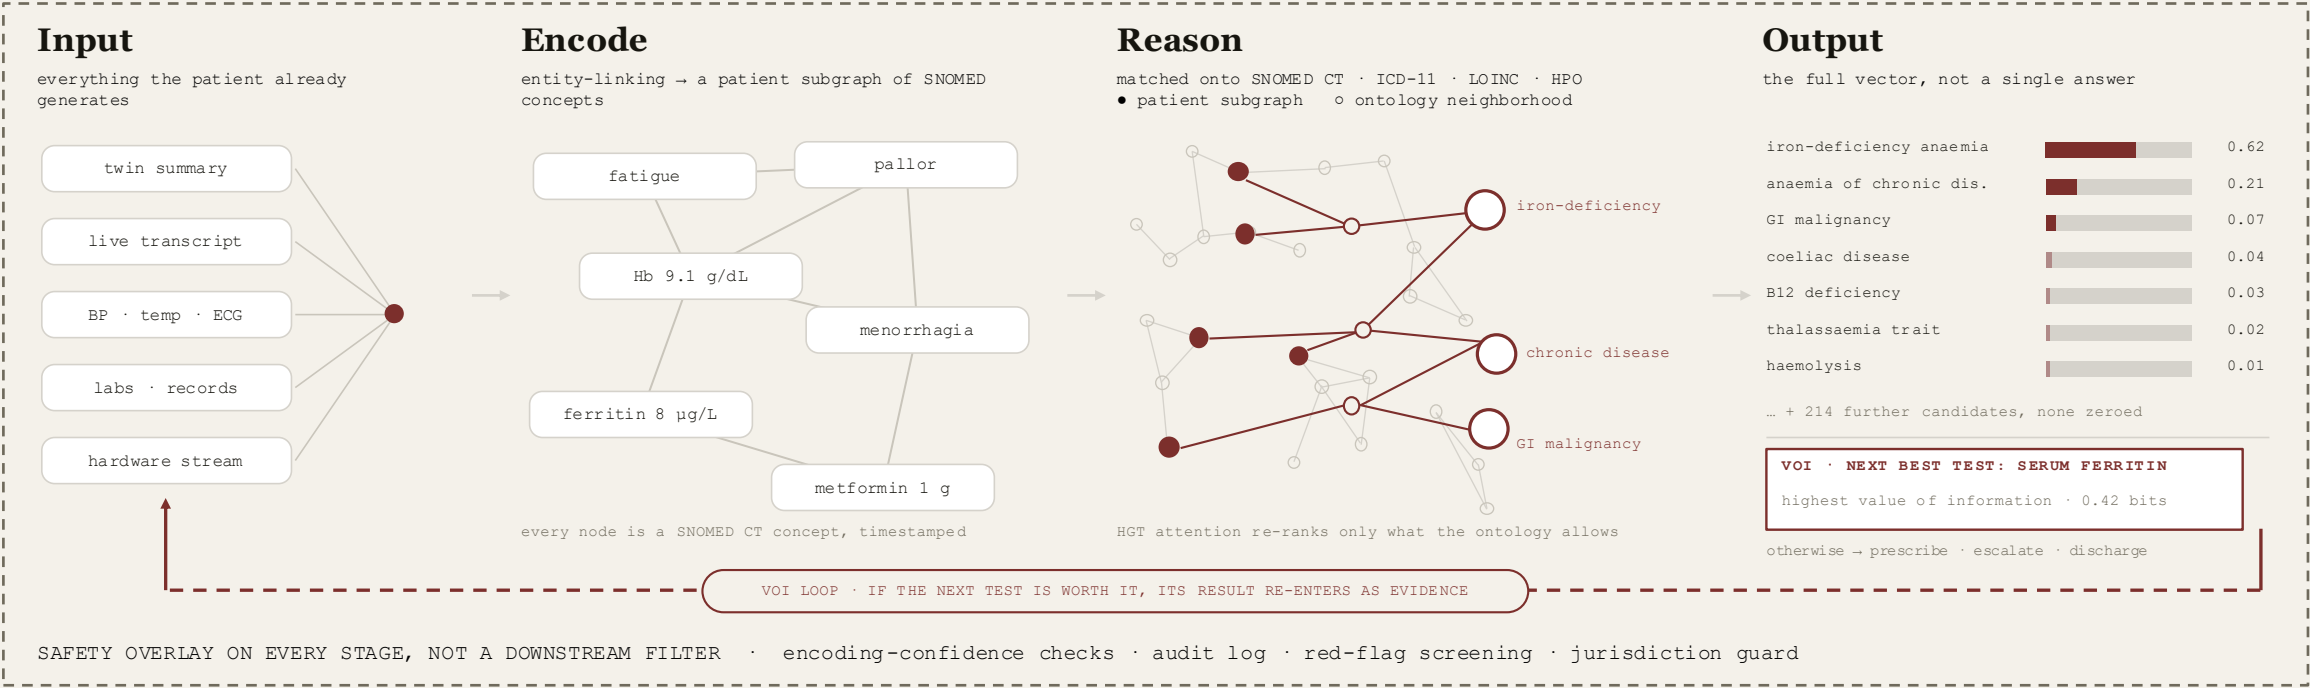

The clinician stays focused on the patient.

Every input arrives automatically, so every output is tailored and eye contact never breaks.

A glass box, not a black box.

Learned where it helps. Auditable where it matters.

HGT, Heterogeneous Graph Transformer: a graph neural network created from ontological foundations that is taught interlinking patterns. The patient graph is projected onto this; diagnoses grows out of the composite image.

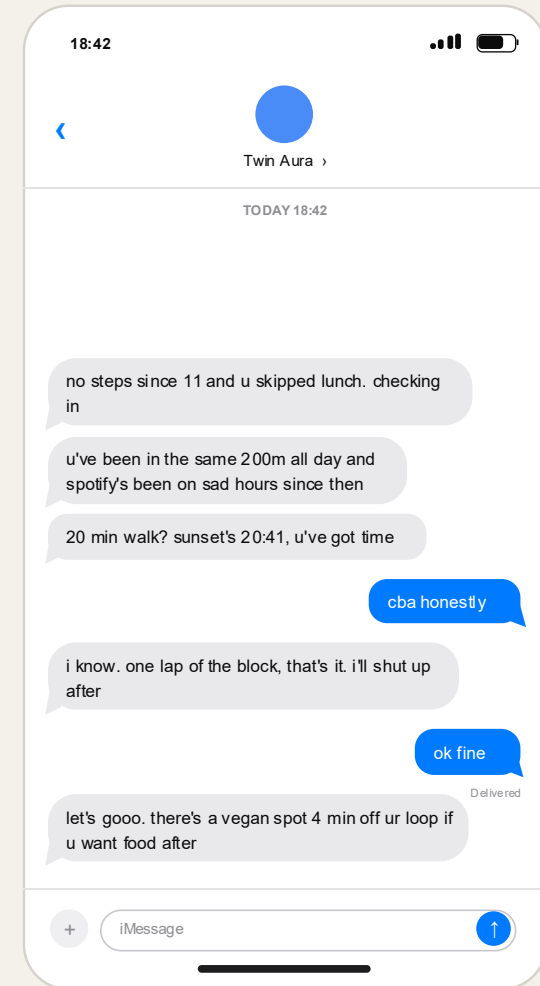

VOI, value of information: a running check on whether the next question, exam or test is worth its cost.

Glass box: designed to be traceable via symbolic provenance

Meet Auratwin

Auracare's social-history engine, spun out as your wellness hub. Guidance before you think you need it.

Sleep, movement, mental wellbeing, meals, screen time and more.
One wellness agent, already in your most common app. Built inside Auracare, spun out to fund it.

NO APP TO OPEN · IT TEXTS FIRST

Wellness apps fail the moment they demand effort.

ONLY

4%

of installers are still active one month later. **The other 96% have churned.** This is the failure of the current market.

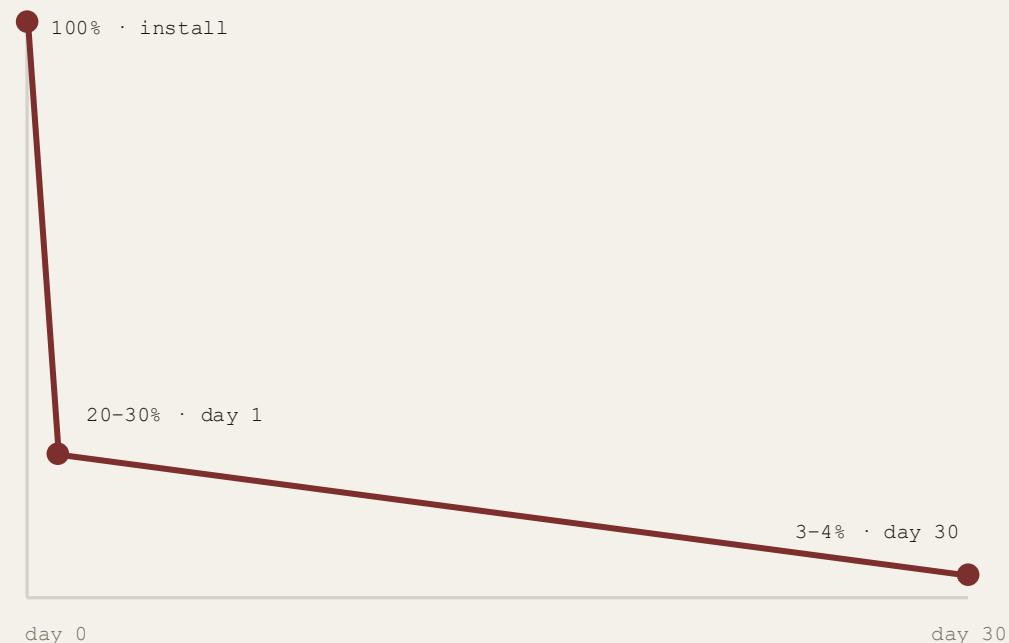

Fragmented · a niche app for every habit, each with its own friction filled UX

Forgettable · miss a few logs and it feels pointless to continue

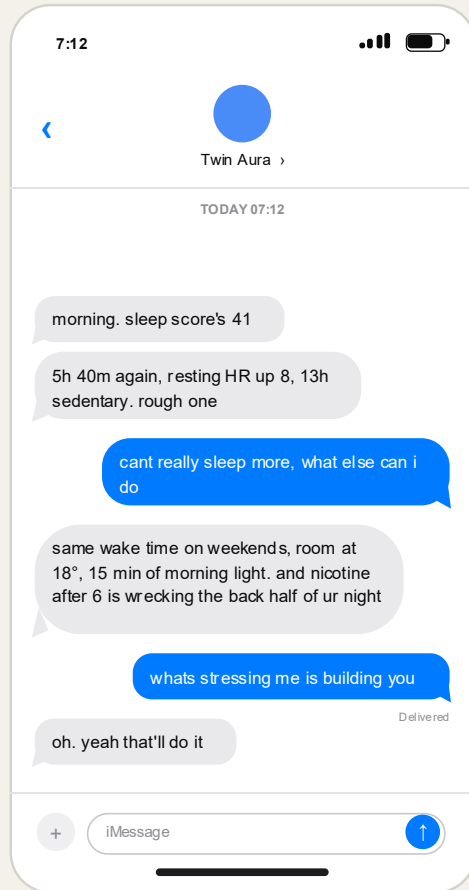

Stressful · a separate entry for every corner of wellness

Effortful · consistency is boring; the work outlasts the motivation

SHARE OF INSTALLERS STILL ACTIVE

An agent that lives in your messages. Replying is the logging.

REPLYING IS THE LOGGING

CONNECTORS · THE DATA MOAT

Every connector deepens the twin's picture of daily life. That high-context data is the moat.

Zero to learn

no new app, no new UX; it lives where you already talk

One platform

one space for everything

It reaches out first

proactive check-ins mean nothing gets forgotten

A personality you can tune

pre-made personalities matching patient demographics, reflexively (in context trained) growing with the user

* Health records can be read into your twin for context, but Auratwin never acts on them clinically. Auratwin is a general-wellness product under the FD&C Act §520(o)(1)(B) exclusion, not a medical device.

Most platforms collect your data. Auratwin *gives it back to you.*

THE WHOLE PICTURE

POPULAR SOURCES SHOWN · WITH YOUR PERMISSION

Body & Health

APPLE HEALTH · OURA · WHOOP · RENPHO

sleep · recovery · movement · body

Mind & Habits

One patient centered care loop Auratwin + Auracare :

daily life in, sharper decisions out, habits back in.

A \$14bn consumer market headed for \$33bn, and a \$12bn signal on the clinical side.

~15.55% CAGR² · average across analysts, separate source from the chart

CDSS Market · AURACARE

OpenEvidence **\$12bn** valuation

The closest execution to Auracare: proof that clinicians adopt tools built for them.

Bayesian Health **~\$40m** valuation

The closest architecture to ours, and the most research-backed methodology in the space.

1 Market size and forecast: Coherent Market Insights. 2 CAGR: average of Business Research Insights and Coherent Market Insights

We are not starting cold.

\$134k

UK government funding

\$300k

angel investment

28

active UK pharmacy partnerships incl.
a regional director with hardware
deployed

Clinical trials

partnership with the Chinese
Academy of Sciences · trials with
hospitals in China begin in December

Core components
built

note generation, prescribing
guidelines and doses; full reasoning
core under testing

Hardware

proof-of-concept otoscope in hand · a
co-founder owns two factories in
China able to build medical hardware
· 3-year Vanta compliance partnership
signed

Data + team

access to Chinese healthcare data ·
founding team from Imperial College
London and UC Berkeley

Funded on two fronts, manufacturing and compliance locked in, and trials in China from December.

Two products, two clean paths to revenue.

AURATWIN · CONSUMER PRODUCT

Months 0–3: free (beta release)

drives the user base and high-context data, valuable to us either way

Then \$10 / month

one unified subscription for customers, far cheaper than stacking single-purpose apps

Free months compound: more context, a smarter twin, more reasons to stay.

AURACARE · CLINICAL · TWO ALTERNATIVE PATHS

A Direct to Digital Services

API access to our CDSS engine for clinical service providers (Ambient Scribe, Telehealth, EMR, Triage etc.)

OR

B Direct to Service Provider

sold to hospitals, GP practices, pharmacies etc. based on the clinician time our service saves

Regulatory pathway not yet confirmed; under active, continuous monitoring.

Pilot agreed. Funding banked. Certified hardware within a year.

Hardware, software, and medical expertise, already in one team.
